apiCancelInspection

Function

Cancel inspection request.

POST/GET `api/cancel-inspection`

Parameters summary

	$params = []	parameters
string	$api_key,…	API key included for every request
integer	$inspection_id,…	inspection ID to cancel

Return value summary

object	
	JSON response with `code` and `result`. In case of success, result will hold the inspection ID which is cancelled. In case of error an additional `error` field is returned describing the error. For example

```
{ "code": 200, "result": 81 }

{ "code": 400, "error": "Unauthorized" }
```
